Rescue Equipment

Rescue from Aerial Lift Devices

The 700FP attaches semi-permanently to the boom with a ratcheting boom strap, while the 700FWI is stored in a canister mounted directly on the truck body.

Both units feature aluminum blocks with nylon sheaves and 75' of twisted rope. Other rope lengths available. A carabiner is provided for attachment to the victim.

Proper training is required to use these items.

700FWI

700FP

Catalog No.	Description	Weight
700FP	Boom Mount Rescue Pack	8 lbs.
700FWI	Truck Mount Rescue Kit	21 lbs.

Aerial Lift-Self Rescue

The 700SRK is designed for personal excavation from an aerial lift that is broken. It also gives a worker hanging off of a platform or basket after an arrested fall, a means of self-rescue. This is especially a concern for single-man crews. It consists of a Evac-Pac, 59' of rope and a web cutter, all in a case carried on a waist belt.

Proper training is required to use these items.

Catalog No.	Description	Weight
700SRK	Aerial Self Rescue Kit	5 lbs.

Substation and Tower Rescue

The 711 Series offers the user multiple options for rescuing workers from substations, towers, and other elevated work areas. The units consist of 200 ft. of polyester rope with eyes on the ends, 2 torso belts, and the other equipment shown.

Proper training is required to use these items.

Catalog No.	Description	Weight
711	Rescue Kit	12 lbs.
711S	Rescue Kit	15 lbs.
